**Betreff:** Your opinion on open science practices in neuroimaging research

Dear member of the neuroimaging community,

How do neuroimaging researchers think about preregistration of studies? What standards do they use to structure their data? What prevents them from sharing primary research data? We ask you for your valuable input on this matter.

This questionnaire addresses active scientific researchers who are working with human neuroimaging data. Based on the results, we hope to inform necessary next steps to encourage Open Science Practices in this field.

We would greatly appreciate it if you could complete the anonymous questionnaire in the link below. It should take about 9 minutes to complete.

Follow this link to the questionnaire or copy and paste the URL into your internet browser

Questions relating to this study? Please feel free to contact us at [openscience.neuroimaging@gmail.com](mailto:openscience.neuroimaging@gmail.com)

Thank you for your consideration.

Best regards,  
Christian Paret & team

PS. Your email address was obtained from one of your published articles. If you do not complete this questionnaire, you will receive a single reminder email. Your email address will not be used for further unsolicited correspondence.
